

Icon Oncology Treatment Facility

Midland Healthcare Precinct, 6 Centennial Place

The recently complete Icon Oncology Treatment Centre is classified as a Private Hospital and has been constructed to meet the strict requirements of its classification. The project is LARU commissioned.

Complete in just 18 weeks, the project includes 38 separate rooms of varying capacities, from consultation rooms, pharmacy, tea preparation and reception, right through to treatment rooms, procedure rooms and the Veritas linear accelerator bunker installed on the ground floor. The bunker has specific materials and installation ratings to accommodate for radiation therapy.

A significant Mechanical Services component included a chiller for the Varian linear accelerator and a system with air and temperature controls for each consulting room.

The two-story facility is the first ICON facility in Western Australia and is built within the outer shell of the heritage listed Midland workshops.

Duration	18 weeks
Size	1,200m ²
Architect	Silver Thomas Hanley
Consultant	Wood and Grieve
Contract	Fixed Lump Sum
