

Perron Group Head Office Upgrade

4 Plain Street, East Perth

Perron Group committed to a programme of services and finishes upgrades and building modifications to their head office workspace, all while their business remained fully operational on the existing site.

The scope included the installation of a lift into the existing building fabric, replacement and upgrade of the mechanical units, new lighting, lighting controls, fire detection services and external works to the entry façade, hard landscaping to courtyards and painting. A spectacular new frameless curved glass balustrade was also included in the works. All works were completed after hours.

Structural building modifications were required to facilitate a new 25-person boardroom, the new external porte-cochere and open plan workspace on Level 1.
